

PROJECT TITLE: Expense Tracker with Budget Alert.

SUBJECT: DevOps

COURSE: BSc Semester 2

GROUP MEMBERS:

1. Raunak Kumar
 2. Hitarth Desai
-

OBJECTIVE:

The objective of this project is to track daily expenses and compare them with a monthly budget using a Python-based system. The system helps users manage their spending effectively.

FEATURES:

1. Add Expense (food, travel, etc.)
 2. View All Expenses
 3. Show Category-wise Total
 4. Set Monthly Budget
 5. Alert if Budget Crossed
 6. Exit
-

SYSTEM FLOW:

The user runs the program and is presented with a menu.

The user selects an option from the menu.

Based on the choice, the program performs actions such as adding expenses, viewing data, or checking the budget.

All expenses are stored in a list.

The program calculates totals and compares them with the budget.

The result is displayed to the user.

LOGIC USED:

- List is used to store expenses

- Tuple is used to store category and amount
 - Dictionary is used to calculate category-wise totals
 - Loop is used for menu repetition
 - Conditional statements are used for decision making
-

DEVOPS LIFECYCLE:

Plan: Define project features and objectives

Code: Write Python program

Build: Create requirements.txt and verify environment

Test: Perform manual testing

Deploy: Run application using Docker

TIMELINE:

Day 1 – Planning and requirement analysis

Day 2 – Coding and implementation

Day 3 – Testing and debugging

Day 4 – Version control using Git

Day 5 – Docker deployment

TEAM CONTRIBUTION:

Raunak Kumar:

- Planning of project
- Python coding (main.py)
- Logic implementation
- Core functionality development (expense handling, budget checking)

Hitarth Desai:

- GitHub repository management (commits, push/pull)
- Testing of application (test cases and validation)
- Docker deployment setup
- Documentation and report formatting
